

Silvertec (UK) Limited

Secure Online Backup for PCs and Servers

Get peace of mind. With Online Backup, your data is safe.

Probably one of the most important parts of business IT today is the safety of your data. Backing up your vital information is key to ensuring the continued success of your company.

Our **Online Backup** technology is simple to use and ensures that a secure copy of your data is kept in an offsite location at all times. It means you don't need to remember to send tapes or data drives out of the building and we offer a complimentary 14 day trial so you can test drive the service.

How does it work?

Online Backup backs up all the information, files and emails stored on your Server or PC to our secure datacentre. So, if the worst should happen and you accidentally delete or overwrite data you can recover it in a jiffy with just a few clicks.

You can choose to backup everything (even music files) or just a selection of information, and ignore that 70's disco album you got for Christmas that is loitering in iTunes somewhere!

What are the business benefits?

Save money: by avoiding the time and expense of setting up your own solution in-house. Never worry about the cost of new hardware like tapes and expensive software updates.

Improve Efficiency: With a completely automated backup process, which is being monitored 24/7 for any failures by our expert operations team who are ready to pounce on any problems, you can focus on other IT projects that deliver real business value.

Reduce Business Downtime: React quickly and get back any lost data. You'll be back to work faster than a speeding bullet.

Interested? Call us on 01908 332 130 today for a complimentary trial of **Online Backup.**
